

Relaunching Quinn for Diwali.

A festive go-to-market story — new templates, simpler plans, sharper outreach, and an Unlimited offer built to convert the season's biggest spenders.

The festive window is the window.

Diwali compresses a quarter's worth of buying intent into a few weeks. For a shoppable-video app on Shopify, that means three things happen at once: merchants spin up new campaigns, traffic spikes drive video views, and pricing decisions get made fast.

The GTM brief: turn that window into adoption, ARPU, and migration — without losing the long tail of cold accounts sitting in the sales pipeline.

1 New templates

Festive-ready, ready to ship live.

2 Revamped plans

More views at the same price on Lite.

3 Unlimited offer

A Diwali-only plan for heavy users.

Drive adoption and maximize conversions during the festive season — across every surface.

Launch what's new

Ship festive templates and a refreshed Lite plan structure ahead of Diwali — communicated as 'more value, more views, same price.'

Re-engage cold leads

Activate the dormant accounts list from sales through coordinated WhatsApp and bulk email campaigns.

Migrate heavy users

Move merchants currently paying >\$50 in usage charges to a Diwali-exclusive Unlimited plan.

Four pillars, one festive motion.

Each pillar targets a different lever: product surface, monetization, distribution, and ARPU. Together they cover the full funnel for the season.

01

New Templates

Festive-ready cards & carousels — Video Card with Popup Details, Shop-Now Pop-up, 3D Cards, and a Stacked Card Carousel.

PRODUCT

02

Revamped Lite Plans

A clean ladder from Free → Starter → Growth → Scale → Advance → Enterprise, with view limits that grow predictably.

PRICING

03

Cold-Lead Outreach

WhatsApp nudges and bulk email campaigns to reactivate dormant leads handed over by the sales team.

OUTREACH

04

Diwali Unlimited

An exclusive plan that absorbs usage charges — built for merchants currently paying >\$50 in overages each month.

ARPU

Festive-ready designs, ready to go live instantly.

Templates are the fastest way to convert intent into action. Merchants don't have time to design during Diwali — they need pre-built, festive widgets they can drop in and ship.

THE INSIGHT

Hover-triggered interactions and stacked carousels feel native to mobile festive shopping — they reward exploration without demanding it. Bundling these into one launch creates a clear narrative for outreach: "new look for Diwali."

WHAT'S LAUNCHING

01 Video Card with Popup

Product details surface only on hover.

02 Shop-Now Pop-up

Hover-triggered shop-now CTA on the card.

03 3D Cards

Smooth pop-up effect as visitors scroll the carousel.

04 Stacked Card Carousel

One card highlighted, others stacked behind.

More value, more views, same price.

A predictable ladder that rewards growth without forcing merchants to think about overages. Each tier inherits the previous and adds clear, named upgrades.

FREE	STARTER	GROWTH	SCALE	ADVANCE	ENT.
\$0	\$9	\$19	\$29	\$49	Custom
/ month	/ month	/ month	/ month	/ month	
300	3,000	7,000	12,000	22,000	Unlimited
views / month	views / month	views / month	views / month	views / month	views / month
Foundation. Upload, embed, import.	Email support + 1 card template.	Same template perks, more headroom.	Adds 1 carousel template of choice.	2 cards + 2 carousels of choice.	Custom templates, dedicated support.

Two channels, one message.

Sales hands over the dormant accounts list. GTM activates them through a coordinated push on WhatsApp and email — same story, format-appropriate delivery.

W H A T S A P P

Personalized nudges

Customised messages for high-paying accounts with template previews and store examples. A common variant for the broader cold list.

- 1:1 messages for high-value accounts
- Template demo links + sample stores
- Group broadcast for the long tail

E M A I L

Bulk + manual campaigns

A festive-themed bulk drop with the new template lineup, layered with manually-sent personal emails for accounts that warrant the touch.

- Bulk campaign with new template visuals
- Manually-sent emails to priority leads
- Clear CTA to billing/upgrade flow

Absorb the overage. Win the heavy users.

A Diwali-exclusive Unlimited Views plan, targeted at merchants currently paying more than \$50/month in usage charges. The pitch: predictable spend during the busiest weeks of the year — and migration that protects MRR going forward.

Unlimited video views

Auto usage charge optional

Slack & email priority support

Remove Quinn branding

TARGET PROFILE

> \$50

monthly usage charges

WHY IT WORKS

Heavy users are the ones most exposed to traffic spikes. A flat plan removes the friction of bill shock and locks them in at the moment they're most engaged.

Two beats, ten days apart.

Tease first, ship second. The teaser builds anticipation across paid and owned channels. The launch turns it into action — same day, all surfaces.

OCT 1

Tease & Announce

Upcoming features, template previews

- Shopify ad teasers
- WhatsApp group nudge
- Email with new template videos + store examples

OCT 10

Launch Day

Templates, Lite plans, Unlimited offer

- New templates roll out (cards & carousels)
- Revamped Lite plans go live
- Diwali Unlimited launches on the main app

Every account hears it where they already listen.

In-app notifications

EXPLORE

First touchpoint for active users — surfaces the new templates and Unlimited offer in context.

Personalized email

ACTIVE

Manually-sent emails for accounts that warrant a real one-to-one — different copy for Lite vs. main app.

WhatsApp nudges

ACTIVE

Customised for high-paying accounts; a common message for the broader cold list.

Shopify ads

TEASER

Teaser ads on the Shopify surface during the Oct 1 announce window to build anticipation.

What success looks like.

Each pillar maps to a measurable shift. The plan succeeds when these three move in parallel.

Template adoption

Higher pickup of festive templates across new and existing merchants for Diwali campaigns.

ARPU on Lite

Upgraded plan ladder pulls users up the curve — same price perception, more committed views.

MRR protection

Heavy-usage merchants migrate to Unlimited, smoothing the day-by-day MRR delta on the main app.

What this play teaches us.

The Diwali GTM is more than a seasonal push — it's a template for any compressed-window release.

01 Sequence beats simultaneity.

Tease 10 days early, then ship every pillar on the same day. One memorable launch beats four scattered ones.

02 Pricing is product.

The Lite ladder and Unlimited offer aren't just monetization — they're the message. "More views, same price" is positioning.

03 Segment the channel, not the story.

Same narrative; WhatsApp for warmth, email for depth, in-app for context, Shopify ads for reach.

04 Migrate the heavy users first.

Targeting >\$50 usage accounts protects MRR fastest — converting those most exposed to bill shock.

Festive windows close fast. Good GTM closes faster.

Diwali 2025 is the rehearsal. The same playbook — tease, ship, segment, migrate — applies to BFCM, end-of-year, and every compressed-window launch after it.
